Alexander Langman Hender

Org design, business systems & growth — for founders building things that have to last | Founder, Abundant Kindling | Head of Tech, RenewCORP | Chief Advocate, Acacia Collective
Greater Adelaide Area

Summary

I help founders and business leaders build the org design, business systems, and growth engines that turn good ideas into enterprises that actually last. Through Abundant Kindling, I work as a fractional executive, systems architect, and growth partner for ventures at the launch, build, grow, and sustain stages. The Clockwork Cloud — my sustainability and decarbonisation practice within Abundant Kindling — applies the same approach to the built environment. My work spans four areas: → Organisational design — building the structures, roles, decision rights, and operating cadences that let founder-led ventures scale without snapping. → Business systems — designing and implementing the platforms, processes, and integrations that turn strategy into operational reality. → Growth — from early-stage GTM and client acquisition through to multi-million-dollar P&L management. → Leadership development — coaching founders and executives through the evolution from startup to sustainable enterprise. Across 17+ years I've led businesses from startup through to \$8M+ in revenue, including CEO and GM roles managing teams of 60+. I've launched new markets from a kitchen table, built business systems for international design houses, restructured operations for venture-capital-owned service businesses, and led decarbonisation strategy for commercial portfolios. At RenewCORP I lead technology and AI strategy, helping building owners shift from reactive maintenance to predictive facility management. At Acacia Collective and Veritable Technology Solutions we're building Australia's only member-owned strata management solution and the systems platform that powers it. This integrated structure is deliberate. It lets me reshape Australia's business landscape by making connections — between people, ideas, and opportunities — to create sustainable value for all stakeholders. BE A BUILDER. HAVE COURAGE. BE SELF-SUFFICIENT.

Experience

Abundant Kindling

Principal Consultant

September 2024 - Present (1 year 9 months)

Australia

Abundant Kindling is a systems studio for founders building things that have to last. We help leaders build the org design, business systems, and growth engines that scale. Whether you need a fractional executive, a technology platform, or someone to turn strategy into action — I provide the kindling that gets things started.

My work spans four critical areas:

- Organisational design — structures, roles, decision rights, and operating cadences that let founder-led ventures scale without snapping.
- Business systems — platforms, processes, and integrations (CRM, financial, operational, AI workflows) that turn strategy into operational reality.
- Growth — early-stage GTM, client acquisition, market entry, and revenue scaling. Practical execution, not deck-ware.
- Leadership development — coaching founders and executives through the evolution from founder-led startup to sustainable enterprise, with tailored support for not-for-profit organisations.

The studio wasn't built and then 'adopted AI'. It was born into a world where AI is part of the fabric of business. Right now, adaptability is the closest thing you can have to sustainable competitive advantage.

The Clockwork Cloud is Abundant Kindling's sustainability and decarbonisation practice, applying the same systems-thinking approach to the built environment — including fractional CSO roles, NABERS strategy, automated energy analysis, and decarbonisation pathway development for commercial portfolios.

Drawing on 17+ years across the sustainability sector and CEO/GM roles leading businesses from startup to \$8M+ in revenue, I bring both the strategic perspective and the operational scar tissue to help founders build ventures that last.

RenewCorp

Head of Sustainability and Technology

September 2024 - Present (1 year 9 months)

I lead technology and AI strategy at RenewCORP, helping building owners shift from reactive maintenance to predictive facility management.

RenewCORP tackles the 40%+ of global emissions that come from the built environment, helping organisations manage facilities more efficiently through an integrated technology platform and service provider network — delivering faster interventions that improve building comfort, efficiency, and reliability while reducing operating expenses.

- Technology and AI strategy — platform direction, AI-enabled workflows, and the technology roadmap that turns RenewCORP from a service business into a data-driven facility management platform.
- Sustainability and decarbonisation — NABERS strategy, commercial decarbonisation pathways, and energy efficiency programs woven through the platform and service offering.
- Client and commercial — major municipal and commercial accounts, tender responses for integrated facility management, and partnership development across the asset and facility management sector.

Working alongside RenewCORP's C-suite to deliver a platform that combines technical depth with commercial pragmatism.

Acacia Collective Strata Management

Chief Advocate

January 2026 - Present (5 months)

Adelaide, SA

Acacia Collective is Australia's only member-owned strata management solution — built on the principle that the people living in a building should own the systems that manage it. As Chief Advocate, I lead member engagement, advocacy, and the strategic narrative that positions member-ownership as a viable alternative to the traditional strata model.

- Advocacy and positioning — building the case for member-owned strata across owners, committees, and the broader property sector.
- Member engagement — designing the experience, communications, and onboarding that turn property owners into engaged members of a collective.

- Strategic narrative — articulating why member-ownership matters and how it changes the economics and accountability of strata management.

Closely partnered with Veritable Technology Solutions, which provides the platform and operational systems that make member-owned strata commercially viable at scale.

Veritable Technology Solutions

Executive General Manager

December 2025 - Present (6 months)

Adelaide, SA

Veritable provides the systems, structure, and services that power Australia's only member-owned strata management solution. As EGM, I lead the platform, operational systems, and service architecture that make member-owned strata management commercially viable at scale.

- Platform and technology — the technical backbone that lets Acacia Collective operate as a member-owned collective rather than a traditional strata manager.

- Operational systems — the processes, workflows, and integrations that deliver strata management services efficiently and at scale.

- Service architecture — designing the delivery model that turns member-ownership from a principle into a day-to-day operational reality.

A deliberate org design decision: separating the member-facing collective (Acacia) from the systems and services engine (Veritable) lets each focus on what it does best while staying tightly coupled on outcomes.

Oratos Consult

National Sustainability Advisory Lead

June 2025 - November 2025 (6 months)

Australia

As National Sustainability Advisory Lead, I led sustainability strategy and advisory services across Australia for commercial and industrial clients working toward carbon reduction and sustainable operations.

- Sustainability strategy — developed frameworks and pathways for clients across diverse sectors, translating carbon targets into practical implementation plans.
- Renewable energy and asset management — advised on large-scale renewable energy projects and asset lifecycle optimisation, drawing on commercial solar and energy system design experience.
- Cross-functional leadership — led cross-functional teams to integrate sustainability initiatives with operational efficiency goals.
- Data-driven delivery — worked with clients to implement sustainability strategies that enhance long-term asset value while reducing environmental impact.

A six-month advisory engagement delivering measurable outcomes for clients transitioning to sustainable operations.

Ensign Services Australia

General Manager - South Australia

August 2021 - August 2024 (3 years 1 month)

Adelaide, SA

As GM South Australia, I held full P&L responsibility for a multi-million-dollar division of Adamantem Capital-owned Ensign Services, leading ~60 staff in the uniform, linen and laundry sector.

- Org design and team leadership — full HR ownership across the SA division: hiring, KPI design, performance management, capability development, and structural decisions. Supported the broader 360-staff SA business on industrial relations and EBA negotiation.
- Business systems and operations — weekly, monthly, and annual P&L reporting at board level; led process improvement across operations, customer service, and back-of-house.
- Growth and commercial — managed key accounts across mining, manufacturing, construction, hospitality, and food production sectors.

Operated under venture-capital governance principles with monthly board-level financial reporting.

Solar Depot Australia

Chief Executive Officer

February 2020 - July 2021 (1 year 6 months)

Adelaide, SA

As CEO, I held full P&L responsibility for an \$8M revenue business with 35–40 staff, reporting to the company director and sole shareholder. Solar Depot specialises in commercial, industrial and agricultural solar projects in the 50–500 kW range.

- Org design and leadership — built and led the executive team, owned all HR functions, and developed the leadership capability to run a complex commercial-scale solar business.
- Business systems — owned cashflow management, asset management, financial systems, and operational reporting. Built the systems that let the business operate predictably at commercial-solar scale.
- Growth and commercial strategy — repositioned the business toward bigger and more bespoke projects, developed new commercial models for SME clients, and pushed the boundaries of traditional solar.

A small business by revenue, but a genuine CEO role with full strategic, operational, and financial accountability.

MyBudget

Project and Innovation Leader

November 2018 - September 2019 (11 months)

Adelaide, Australia

As Project and Innovation Leader, I led the growth operations function at MyBudget — identifying, prioritising, and executing the changes that grew the client base across acquisition, activation, retention, and cross-selling.

- Growth strategy and execution — optimised the full client journey from top of funnel through to long-term satisfaction, working across sales, marketing, and digital channels.
- Sales and marketing leadership — partnered closely with the sales and marketing team on sales management, digital marketing, and social media strategy.

- Client Success and Innovation — facilitated the Client Success and Innovation Team, turning customer insight into product and process improvements.
- Continuous improvement — led business development and continuous improvement initiatives across the growth function.

The role was made redundant as part of a broader restructure of the innovation, business development, and marketing teams.

ofo

City Manager

September 2017 - July 2018 (11 months)

Greater Adelaide Area

As ofo's third Australian employee and longest-serving Australian team member, I launched ofo's Adelaide operations from scratch — establishing the first ofo city in the Southern Hemisphere. This was a launch, build, grow, and wind-down story lived through extreme growth and global collapse.

- Launch and growth — built the Adelaide operation from a kitchen table to a functioning city-scale dockless bike-share business across multiple local government areas. Adelaide became the first Australian city to charge for the service, demonstrating commercial viability alongside social benefit.
- Org design and team building — recruited, trained, and developed the local team. Established roles, processes, and operating cadence from zero.
- Stakeholder management — secured a permanent operational base, negotiated with multiple local councils, and developed the regulatory and partnership relationships needed to operate.
- Wind-down and asset recovery — when ofo collapsed globally, I led an exit that paid every bill, collected every bike, and found a new home for the local fleet. A clean, ethical liquidation in the middle of a global brand implosion.

Uber

Operations Manager

January 2017 - September 2017 (9 months)

Adelaide, Australia

As the UberEATS Operations Manager, I was responsible for getting meals from our restaurant-partners' kitchens to their customers. This was an extremely diverse role that included attracting and retaining delivery-partners, ensuring their efficient deployment across the city, maintaining delivery reliability and ensuring the restaurants, consumers and delivery-partners had a fantastic experience using the UberEATS platform to earn money or get great food delivered.

I left Uber to join OFO and launch their Australian operations.

Essense of Australia

Project Manager

May 2015 - December 2016 (1 year 8 months)

Perth Area, Australia

Sat within Essense's Business Systems team — the operational core of a fast-growing international bridal design and manufacturing business.

- Business systems and process improvement — led cross-functional projects spanning procurement, production, customer services, sales, marketing, finance, and IT. Focus on creating a culture of innovation, reducing costs, improving margins, and lowering operational risk.

- Internal client management — treated each business unit as a client, working to improve the efficiency and effectiveness of every part of the business.

End-to-end exposure to the systems that make a complex international design and manufacturing business run.

Reid Cycles

Business Operations Manager

June 2013 - May 2015 (2 years)

Melbourne Area, Australia

As Business Operations Manager, I owned operational and administrative systems end-to-end — from the first stage of product development through to products landing in stores.

- Business systems and process improvement — led the process improvement projects that kept a fast-moving retail and e-commerce business running as it scaled.

- Operations leadership — owned the operational backbone connecting product development, supply chain, and retail delivery.
- Strategic alignment — linked process improvement initiatives directly to organisational strategy, ensuring operational work served commercial priorities.

End-to-end operational ownership in a growing multi-channel cycling business.

Bicycle Network

Business Development & Project Manager

August 2011 - July 2013 (2 years)

Melbourne, Australia

Bicycle Network is a charity that promotes the health of the community. As a leading social enterprise, we work with our supporters to get “More People Cycling More Often” and measurably grow the bike riding world.

I held two roles within Bicycle Network, in the Bike Parking Experts and Ride2School Program divisions of the organisation.

My most recent assignment at Bicycle Network was to the Ride2School Program. In this role, I worked on a diverse range of projects including the development of our internal systems, new event and intervention development and new behaviour change program development. I worked with school staff members, parents, local government, health promotion / sustainability groups, suppliers and other stakeholders.

Prior to working with the Ride2School Program, I was assigned to the Bike Parking Experts division of Bicycle Network. In this role, I provided advice to builders and architects on the design and installation of bike parking rails and end-of-trip facilities, as well as developing new business opportunities. The Bike Parking Experts specialise in bicycle fixing rails and associated metal work for the building and construction industry. We have provided a range of products for over 18 years including our own propriety designs, such as the Ned Kelly® wall mounted rail.

SUHO

Sustainable Design Consultant

August 2008 - April 2010 (1 year 9 months)

Adelaide, South Australia, Australia

In this role, I liaised between our clients and our technical team, helping building owners, designers, and architects achieve compliance with the thermal efficiency requirements of the National Construction Code. We used alternative verification methods, particularly digital modelling of buildings, to provide a smarter, more effective pathway to thermal efficiency. We also helped designers go beyond the requirements to deliver projects that are more comfortable, more efficient, and better designed than the norm. This resulted in improved ratings and better performance against Green Star, NABERS, and others.

Education

Australian Institute of Company Directors

Introduction to Climate Governance · (May 2024 - June 2024)

University of South Australia

Graduate Certificate, Project Management · (2013 - 2013)

University of Southern Queensland

Master's Degree, Sustainability Science · (2009 - 2009)

University of Adelaide

Bachelor's Degree, Commerce (International Business) · (2003 - 2006)

University of Adelaide

Bachelor's Degree, International Studies · (2003 - 2006)
